🔒 PENETRATION TESTING REPORT

Client: zero.webappsecurity

Target: http://zero.webappsecurity.com

Generated: 3/13/2026, 5:12:05 AM

Classification: CONFIDENTIAL

DOCUMENT INFORMATION

Report Type	Evidence-Based Security Assessment
Target	http://zero.webappsecurity.com
Assessment Date	2026-03-13
Generated By	VulnCraft AI

1. EXECUTIVE SUMMARY

1.1 Assessment Overview

The assessment of http://zero.webappsecurity.com revealed multiple medium-severity vulnerabilities, highlighting the need for improved security configurations and practices.

1.2 Key Observations

The target application exhibited several security weaknesses, primarily related to information disclosure and security header configurations, which could be leveraged by attackers to gain insights into the application's architecture or exploit potential vulnerabilities.

2. ASSESSMENT CONTEXT

Target Application: http://zero.webappsecurity.com

Assessment Type: Black Box

Assessment Nature: Automated testing with evidence-based review

Methodology Reference: OWASP Testing Guide, PTES

3. OBSERVED SECURITY FINDINGS

V-001 - INFO DISCLOSURE HEADERS

Finding ID: V-001

Severity Level: Medium

Evidence Confidence: Medium

OBSERVATION SUMMARY

Indicators suggest that the application's response headers may disclose sensitive information about the application's architecture or technology stack.

WHY THIS MATTERS

This could potentially aid an attacker in identifying vulnerabilities or planning targeted attacks, thus impacting the security posture of the application.

TECHNICAL EVIDENCE

Endpoint: http://zero.webappsecurity.com

HTTP Method: GET

Parameter: N/A

Payload Tested: N/A

Observed Response or Behavior: See raw scan output for details on disclosed headers

V-002 - MISSING SECURITY HEADERS

Finding ID: V-002

Severity Level: Medium

Evidence Confidence: Medium

OBSERVATION SUMMARY

Observed behavior indicates that the application is missing essential security headers, which are crucial for protecting against various web application vulnerabilities.

WHY THIS MATTERS

The absence of these headers could expose the application and its users to risks such as cross-site scripting (XSS), clickjacking, and other attacks, thereby compromising the application's security and user trust.

TECHNICAL EVIDENCE

Endpoint: http://zero.webappsecurity.com

HTTP Method: GET

Parameter: N/A

Payload Tested: N/A

Observed Response or Behavior: See raw scan output for missing security headers

V-003 - PERMISSIONS POLICY

Finding ID: V-003

Severity Level: Medium

Evidence Confidence: Medium

OBSERVATION SUMMARY

The application's permissions policy was found to be inadequate, potentially allowing unauthorized access to sensitive features or data.

WHY THIS MATTERS

An improperly configured permissions policy can lead to unauthorized access, data breaches, or other security incidents, ultimately affecting the application's integrity and user data.

TECHNICAL EVIDENCE

Endpoint: http://zero.webappsecurity.com

HTTP Method: GET

Parameter: N/A

Payload Tested: N/A

Observed Response or Behavior: See raw scan output for permissions policy details

V-004 - TLS SECURITY CHECK

Finding ID: V-004

Severity Level: Medium

Evidence Confidence: Medium

OBSERVATION SUMMARY

The TLS configuration of the application was found to have security weaknesses, which could be exploited by attackers to intercept or manipulate sensitive data.

WHY THIS MATTERS

A vulnerable TLS configuration poses significant risks to the confidentiality and integrity of data exchanged between the application and its users, potentially leading to data breaches or eavesdropping.

TECHNICAL EVIDENCE

Endpoint: http://zero.webappsecurity.com

HTTP Method: GET

Parameter: N/A

Payload Tested: N/A

Observed Response or Behavior: See raw scan output for TLS security check results

4. FINDINGS SUMMARY

ID	Title	Severity	Evidence Confidence
V-001	INFO DISCLOSURE HEADERS	Medium	Medium
V-002	MISSING SECURITY HEADERS	Medium	Medium
V-003	PERMISSIONS POLICY	Medium	Medium
V-004	TLS SECURITY CHECK	Medium	Medium

5. REMEDIATION & VALIDATION GUIDANCE

V-001 - INFO DISCLOSURE HEADERS

It is recommended to configure the application to omit or mask sensitive information in its response headers, enhancing the overall security of the application.

V-002 - MISSING SECURITY HEADERS

Implementing the appropriate security headers, such as Content-Security-Policy, X-Frame-Options, and Strict-Transport-Security, can significantly enhance the application's security posture and protect against common web vulnerabilities.

V-003 - PERMISSIONS POLICY

Review and refine the permissions policy to ensure that access to sensitive features and data is strictly controlled and limited to authorized entities, thus mitigating potential security risks.

V-004 - TLS SECURITY CHECK

It is essential to review and enhance the TLS configuration to adhere to current security standards, including the use of secure protocols and cipher suites, to protect against TLS-related vulnerabilities.

6. OVERALL ASSESSMENT VERDICT

Based on the observed findings, it is recommended that the application's security configurations and practices be reviewed and enhanced to address the identified vulnerabilities and improve the overall security posture. Implementing the recommended remediations will significantly reduce the risk of potential security incidents and protect the application and its users.

7. TECHNICAL APPENDIX

V-001 - INFO DISCLOSURE HEADERS

Finding ID: V-001

Endpoint(s): http://zero.webappsecurity.com

Parameter(s): N/A

Payload(s) tested: N/A

Observed response patterns: See raw scan output for details on disclosed headers

V-002 - MISSING SECURITY HEADERS

Finding ID: V-002

Endpoint(s): http://zero.webappsecurity.com

Parameter(s): N/A

Payload(s) tested: N/A

Observed response patterns: See raw scan output for missing security headers

V-003 - PERMISSIONS POLICY

Finding ID: V-003

Endpoint(s): http://zero.webappsecurity.com

Parameter(s): N/A

Payload(s) tested: N/A

Observed response patterns: See raw scan output for permissions policy details

V-004 - TLS SECURITY CHECK

Finding ID: V-004

Endpoint(s): http://zero.webappsecurity.com

Parameter(s): N/A

Payload(s) tested: N/A

Observed response patterns: See raw scan output for TLS security check results
